EXPERIENCE

DS Systems, Remote — Machine Learning Engineer Intern | August 2025 – November 2025

- Led a 7-person cross-functional team that delivered a healthcare fraud-detection prototype achieving ~95% accuracy, 0.90 F1-score and ~85% fraud recall on holdout data. Trained, validated, and tested classification models on 12,930 healthcare claims while coordinating sprint tasks, reviews, and delivery milestones.
- Built a full-stack analytics dashboard using HTML, CSS, JavaScript, and Bootstrap; presented the proof of concept to the entire company.

ClearVerse AI, Remote — AI Model Quality & Evaluation Fellow | Mar 2026 – June 2026

- Evaluated AI model quality and evidence-reporting behavior to improve the reliability of reports shown to users, identifying alignment gaps in system outputs, evidence, and frontend/backend validation logic.
- Reproduced and prototyped AI system issues, analyzed AI reasoning vs pattern matching, created edge-case scenarios, and failure-mode taxonomies that helped the company better understand product risks, reproduce AI reporting issues, and prioritize implementation fixes.
- Led weekly company-wide presentations to leadership, translating AI evaluation findings into engineering-ready recommendations for regression testing, validation logic, UI truthfulness, reporting accuracy, and user trust.

California State University, Northridge — Undergraduate Research Assistant in Compilers & Programming Languages | Nov 2025 – May 2026

- Built a Scala-based code generator that produced syntactically valid Swift seed files for compiler fuzzing and automated software testing research.
- Generated mostly ill-typed Swift programs to test whether the Swift compiler correctly rejected invalid inputs, helping identify potential soundness bugs and compiler reliability issues.
- Developed and refined seed-generation logic, Swift driver wrappers, and mutation-based testing workflows to support experimental compiler evaluation under Prof. Kyle Dewey.

PROJECTS

Storm44 — AI-Powered Study Tool

- Developed an AI-powered study platform that converts YouTube videos, PDFs, and notes into flashcards and quizzes to help students study more efficiently using a cloud-hosted RAG pipeline and PostgreSQL
- Integrated an AI tutor pipeline for personalized study assistance, supporting content ingestion, transformation, and interactive feedback

Smart Energy Management — Deep Reinforcement Learning HVAC Optimization

- Built a custom OpenAI Gym HVAC simulation environment modeling indoor temperature, outdoor temperature, time of day, occupancy, and electricity price to study energy-cost and comfort tradeoffs in commercial buildings.
- Trained and evaluated a PPO controller using Stable-Baselines3 against a rule-based baseline across fixed-seed evaluation episodes, reducing simulated energy cost while analyzing comfort violations, reward stability, and deployment tradeoffs.

EDUCATION

University of Southern California — M.S. Computer Science, Artificial Intelligence | Aug 2026 – May 2028

California State University, Northridge — B.S. Computer Science | Aug 2023 – May 2026

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, HTML, CSS, SQL, C++, C, C#, Scala, Swift

Frameworks & Libraries: PyTorch, Stable-Baselines3, OpenAI Gym, Sentence-Transformers, FastAPI, Spring Boot, Leaflet.js, Bootstrap, Pandas, Scikit-learn

Tools & Platforms: Git, GitHub, Azure, REST APIs, PostgreSQL, TensorBoard, Hugging Face, Kaggle, Jira, Node.js, Stripe, MySQL Workbench
